TIGERS

4/26/18

There were two tigers in a Zoo and they were friends with all of the other animals. But something happened when they went to sleep. A person came and took the tigers out of the cage and brung them into the middle of nowhere. They took the tigers because they are people who force animals to fight each other but they fell out of the trunk When they woke up they were laying on trees in the jungle looking at each other like they know the way back

The journey starts

The two tigers decided to work together one tiger snuffed the ground and found another tigers scent. They followed the scent and found a couple of rocks with tiger paw prints on it. The prints on the rocks all went straight the tigers just followed the scent. While they were following the scent they got hungry they saw a little rabbit and killed it for food. And there was a little pond next to the rabbit which they drunk from. Then it was back to following the tracks hopefully leading to the Zoo. On the way there the tigers saw some animals they thought they could help them. (the animals were a rabbit, a bunny, and a turtle).

Meeting friends

The animals that they saw looked like they were looking for the zoo also. As soon as the other animals saw the tigers they ran but the tigers didn't chase them. Calmly the animals came back like they weren't even scared. The other animals noticed that the tigers wanted to get back also. Of course they were traveling together but the tigers were in front. And they saw pat of the Zoo but it was closed. And they waited until it was day time because they were tired also.

Finally back

It was morning and the Zookeepers saw all of the animals and took them into their cages. The tigers were in their old cage with the other excited tigers. Even the Zookeepers were happy that all of their animals came back. The first thing both of the tigers did when they were in the cage was lay down they were exhausted. And if they came all the way back to the Zoo they must be happy that they are there.
